- 1. The Directorate General of the SAGs reduced the 1953 crude oil imports from 480,000 to 400,000 tons including 220,000 tons scheduled to be distributed to the Chemiewerke Mineralcelwark Luetzkendorf VFB, and 15,000 tons to the Mineralcelwark Luetzkendorf VFB, and 15,000 tons to the Mineralcelwark Herrenleite. Pertinent discussions were still going on , as Leuna raised objections to the reduction.
- 2. Since the Schwarzheide SAG proposed to process crude oil from Leuna, which, iscusves, was rejuctant to this, no final decision was made on the distribution of the 1953 crude oil imports.
- 25X1 1. Comment. The reduction of the crude oil imports by 80,000 tons affects only the Leuna Morks which, according to the original 1953 plan, were to process 300,000 tons of crude oil from Zistersdorf in Austria. If this reduction of the crude oil contingent become effective, the economic control agencies in Mast Germany will have succeeded in making Leuna at least to some extent, resume the hydrogenation of light te low temperature tar. Surplus lighte tar is still available from the 1952 production.
